The invention describes an isolated polynuclectide encoding a first antibody at least 95-100% identical to a second antibody consisting of an amino acid sequence comprising at least one, two or three CDR regions of a variable heavy (VH) or variable light (VL) domain of the antibody expressed by a hybridoma cell line consisting of XF3.5F1, XF11.1F8, XF3.5A2, XF3.1088, XF3.2.9E6, XF27/28.1D5, XF27/28.1SF1, xF11.1F8 is useful treating, yreventing, ameliorating, prognosing or monitoring cancers or other diseases or disorders e.g. immunologic deficiency syndromes such as blood protein disorders and ataxia telanglectasia, inflammation associated disorders such as endotoxin lethality, nephritis and inflammatory bowel disease, conditions associated with an increase in

The invention relates to human G-protein chemokine receptor (CCR5), HDGMR10 proteins and nucleic acid molecules encoding such proteins. CCR5 antibodies are used for the treatment or prevention of inflammation, defective or aberrant chemotaxis of immune cells or T cell antigenpresenting cell interaction, viral infections (specifically human immune deficiency (including its early stages), cytomegalo or pox viruses), autoimmune disease, rheumatoid arthritis, neurodeganeration, Pneumocystis carlini infection, Kaposi's sarcoma or any condition associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
certain haematopoietic cells such as histiocytosis, defective or aberrant chemotaxis of immune cells or T-cell antigen presenting cell interaction, an infectious disease, an autoimmune disease such as Addison's disease, dermatitis and rheumatoid arthritis, allergies, a neurodegenerative poxyirus intection at the title for the form of the formative or poxyirus infection, a Pneumocystis carnii infection, Kaposi's sarcoma, cardiovascular disorder such as atherosclerosis, lymphocytopenias, or a disease or disorder associated with aberrant expression of novel human G-protein chemokine receptor (CCRS) HDGNR10. This is an amino acid sequence of Human G-protein chemokine receptor (CCRS) HDGNR10 #1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid encoding antibodies to the human CCR5 receptor HDGNR10, useful for treatment, prevention and diagnosis of e.g. cancer, also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; G-protein chemokine receptor; CCR5; HDGNR10 protein; cancer; inflammation; viral infection; autoimmune disease; neurodegeneration; rheumatoid arthritis; Pneumocystis carinii infection; Kaposi's sarcoma; hyperproliferative disease; receptor.

CCR5 antibodies are used for the treatment or prevention of inflammation, defective or aberrant chemotaxis of immune cells or T cell antigenpresenting cell interaction, viral infections (specifically human immune deficiency (including its early stages), cytomegalo or pox viruses), autoimmune disease, rheumatoid arthritis, neurodegeneration, Pneumocystis carinii infection, Raposi's sarcoma or any condition associated with detection, diagnosis, prognosis and monitoring of cancers or other hyperproliferative diseases. The present sequence is human G-protein chemokine receptor (CCR5), HDGNR10 DNA
aberrant expression of CCR5 or their ligands. They are also used for the detection, diagnosis, prognosis and monitoring of cancers or other hyperproliferative diseases. The present sequence is human G-protein chemokine receptor (CCR5), HDGNR10 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid encoding antibodies to the human CCRS receptor HDGNR10, useful for treatment, prevention and diagnosis of e.g. cancer, also

Ruben SM; Li Y,

2002-598724/64. N-PSDB; ABN86542 New polynucleotide encoding a human G protein chemokine receptor HDGNR10, useful e.g. for treating tumors.

Claim 7; Fig 1; 22pp; English

The invention relates to a novel human 7-transmembrane receptor, HDGNR10, which has been identified as a G-protein chemokine receptor. The GPCR HDGNR10 polypeptide can be expressed by standard recombinant methodology. Compounds that activate or inhibit the receptor polypeptide, optionally expressed from DNA in gene therapy vectors, are used to treat diseases that require: (a) activation of the receptor (e.g. stimulation of haematopoissis, treatment of solid tumours, T-cell mediated autoimmune diseases, parasitic infections, psoriasis etc.); or (b) inhibition of the receptor (e.g. allergy, inflammation, rheumatoid arthritis, silicosis etc.) The present sequence represents the human HDGNR10 receptor ABB 1054

New haplotypes of the human chemokine (C-C motif) receptor 5 gene, useful to diagnose and treat diseases associated with its abnormal expression or function, including human immunodeficiency virus-1 infection.

Claim 29; Fig 3; 61pp; English

The present sequence is that of a polypeptide encoded by the human chemokine (C-C motif) receptor 5 (CRS) gene of the invention (see ABAA7318). The specification describes haplotyping the CCRS gene of an individual by determining if the individual has one of the CCRS paplotypes or haplotype pairs fully defined in the specification. The specification also describes an isolated polymulaciented comprising a mucleotide sequence which is a polymorphic variant of the reference CCRS gene sequence and comprises an isogene defined by a haplotype described in the specification and itse encoded polymorphide. The methods of the invention are useful to diagnose and develop treatment for diseases associated with abnormal expression or function of the gene. The CCRS isogenes and the screened compounds are useful for treating human immunodeficiency virus (HIV)-1 infection and the progression to acquired immunodeficiency syndrome (AIDS). The invention has antiviral applications. The specification describes genotyping the CCRS gene of an individual; predicting a haplotype pair for the CCRS gene of an individual; predicting a nasociation between a trait and a haplotype or haplotype pair for the CCRS gene. The specification describes composition comprising a genotyping oligonucleotide for detecting a CCRS polymorphism, a recombinant non-human organism transformed with CCRS polymucleotide syncessing a CCRS polymeled by the variant sequence; an isolated antibody specific for the CCRS polymeled by the variant sequence; an isolated antibody specific for the CCRS polymeled by the variant sequence.

Sequence 352 AA;

The invention discloses a G-protein chemokine receptor (sometimes referred to as a 7-transmembrane receptor) polypeptide, HDGNR10, and the polymucleotide encoding it. G-protein chemokine receptors are involved in signal transduction pathways. The polymucleotide and polypeptide can be useful to identify compounds which activate or inhibit activation of the protein and these compounds are useful for treating a patient having need to activate or inhibit a G-protein chemokine receptor. The compound is daministered by providing to the patient DNA encoding the agonist or antagonist and expressing them in vivo (gene therapy). The polymucleotides and polypeptide are also useful for for diagnosing a disease or susceptibility to a disease related to an under-expression of the protein for chromosome identification or as immunogens for producing articles are useful in stimulating haematopoiesis, wound healing, coagulation, angiogenesis, to treat solid tumours, chronic infections, psoriasis and to stimulate growth factor activity.

Antagonists are useful in the prevention and treatment of allergy, atherogenesis, anaphylaxis, malignancy, chronic and acute inflammation, hattamine and igE-mediated allergic reactions, prosteals and to stimulate growth factor activity.

Antagonists are useful in the prevention and acute inflammation, hattamine and igE-mediated allergic reactions, prosteals and to stimulate growth factor activity.

Antagonists are useful in the prevention, where and acute inflammation, hattamine and igE-mediated allergic reactions, prosteals and the prevention and treatment of allergy, shock and hyper-eosinophilic syndrome. The sequence presented is the thuman HDGNR10 protein ö Novel human G-protein chemokine receptor polypeptide useful for diagnostic purposes and for identifying modulators of the polypeptide useful for treating leukemia, autoimmune diseases, psoriasis and allergic Human; receptor; G-protein chemokine receptor; 7-transmembrane receptor; HDGNR10; signal transduction; gene therapy; haematopoiesis; woud healing; coagulation; angiogenesis; tumour; chronic infection; leukaemia; T-cell mediated auto-immune disease; parasitic infection; psoriasis; growth factor; allergy; atherogenesis; anaphylaxis; malignamation; histamine; Ige-mediated; prostaglandin-independent fever; bone marrow failure; silicosis; sarcoidosis; rheumatoid arthritis; shock; hyper-eosinophilic syndrome. ```
The present invention describes an isolated nucleic acid molecule, which comprises the sequence of any of the genes that are up-regulated or down-regulated in specific cancers (e.g. about 1031 genes up-regulated in regulated in specific cancers (e.g. about 1031 genes up-regulated in carter lymphocytic leukemia). ACC72641 to ACC72860 represent cancer related gene nucleotide sequences which encode the proteins given in ABR5851 to ABR58709. Also described: (1) determining the presence or absence of a pathological cell in a patient; (2) an expression vector comprising the vector; (4) an isolated polypeptide, which is encoded by comprising the vector; (4) an isolated polypeptide, which is encoded by comprising the vector; (5) an antibody that specifically binds the polypeptide of (4); (6) specifically targeting a compound to a pathological cell in a companient by administering to the patient the antibody above; and (7) a companient by administering to the patient the antibody above; and (7) a companient of the patient the antibody above; and (7) a companient of a pathological cell in a companient of a pathological cell in a companient of a pathological cell in a companient of the patient the nucleic acid is useful for therapeutic targets. In particular, the nucleic acid is useful for atheroselerosis and endometriosis. The nucleic acid is also useful in companient of any screening, particularly for identifying agents for treating these companients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       а

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-UB-46-343D-2
| Sequence 2. Application US/08466343D |
| Patent NO. 6025154 |
| TITLE OF INVENTION: |
| TITLE OF INVENTION: | CHEMOKINE RECEPTOR HOGNEID (AS AMENDED) |
| NUMBER OF SEQUENCES: |
| CORRESPONDENCE ADDRESS: |
| ADDRESSER: STERAF, KESSLER, GOLDSTEIN & FOX P.L.L.C. |
| STREET: 1100 NEW YORK AVE., NW, SUITE 600 |
| CONTRY: USA |
| COMPUTER READBLE FORM: |
| MEDIUM TYPE: | Flopy disk |
| COMPUTER: | IMP PC compatible |
| COMPUTER: | IMP PC compatible |
| OPERATING SYSTEM: | US/08/466,343D |
| TILNG DATE: 06-JUN-1995 |
| CLASSIFICATION NUMBER: US/08/466,343D |
| PILING DATE: 06-JUN-1995 |
| CLASSIFICATION NUMBER: 1488.1150000/EKS/KLM |
| REDISTATION NUMBER: 36.68 |
| REPRENCE/DOCKET NUMBER: 36.88 |
| REPRENCE/DOCKET NUMBER: 1488.1150000/EKS/KLM |
| TELEPHONE: (202) 371-2500 |
| TELEPHONE: (202) 371-2500 |
| TELEPHONE: CHARACTERISTICS: |
| LENGTH: 352 amino acids |
| TYPE: anino acids |
| TYPE: aci
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 352;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              100.0%; Score 95; DB 3; L

Sequence 2, Application US/08575967A

Patent No. 6265184

GARNEAL INFORMATION:

APPLICANT: Gray et al.

ITILE OF INVENTION: Chemokine Receptor Materials and Methods NUMBER OF SEQUENCES: 16

CORRESPONDENCE ADDRESS:

ADDRESSEE: Marshall, O'Toole, Gerstein, Murray & Borun STREET: 6300 Sears Tower, 233 S. Wacker Drive CITY: Chicago STATE: Illinois

COUNTY: USA

MEDIUM TYPE: Ploppy disk

COMPUTER READABLE FORM:

MEDIUM TYPE: IBM PC Compatible

CORRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/55,967A

FIRM DATA:

PATELICATION NUMBER: US/08/55,967A

Sequence 2. Application US/08724984A

Patent No. 6388055

GENERAL INFORMATION:
APPLICANT: Derk Bergsma, Mary Brawner, and Usman Shabon
APPLICANT: Derk Bergsma, Mary Brawner, and Usman Shabon
TITLE OF INVENTION: OKRS Receptor
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: SmithKline Beecham Corporation
STREET: 709 Swedeland Road, P.O. Box 1539
CITY: King of Prussia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1, Application US/09796202

Patent No. 6548636

GENERAL INFORMATION:
APPLICANT: Dragic, Tatjana
APPLICANT: Dragic, William
ITILE OF INVENTION: SULFATED CCR5 PEPTIDES FOR HIV-1 INFECTION
FILE REPERRNCE: 2048/61010/JPW/SHS
CURRENT APPLICATION NUMBER: US/09/796,202
CURRENT FILING DATE: 201-02-28
NUMBER OF SEQ ID NOS: 17
SOFTWARE: Patentin version 3.0
                                                                                                                                                                                                                                                                                  100.0%; Score 95; DB 4; Length 352; 100.0%; Pred. No. 8.2e-09; ive 0; Mismatches 0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Indels

Sequence 5, Application US/08446669

Patent No. 613287

GENERAL INCEMATION:

REPLICANT: Caughlin, Shaun

APPLICANT: Coughlin, Shaun

TITLE OF INVENTION: PROTEIN RECEPTORS

NUMBER OF SEQUENCES: 14

CORRESPONDENCE ADDRESS:

ADDRESSEE: California

COUNTRY: Palo Alto Square

COUNTRY: USA

STATE: California

COUNTRY: USA

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25

CLASSIFICATION NUMBER: 30,092

REGISTRATION NUMBER: 30,092

REERRONCENTONING NUMBER: 30,005

TELECOMMUNICATION NUMBER: 30,005

TELECOMMUNICATION NUMBER: 30,005

GENERAL INFORMATION:
APPLICANT: FORSEMANN, Wolf-Georg; FORSEMANN, Ulf; ADERMANN, Knut;
APPLICANT: HEITLAND, Aleksandra; SPODSBERG, Nikolaj
TITLE OF INVENTION: Disgnostic Agent and Medicament for Examining the
TITLE OF INVENTION: Cell Surface Proteome of Tumor and Inflammation Cells and
TITLE OF INVENTION: For Treating Tumor Diseases and Inflammation Cells and
TITLE OF INVENTION: Preferably with the Aid of Specific Chemokine
TITLE OF INVENTION: Receptor Analysis and Chemokine Receptor/Ligand Interaction
FILE REFERENCE: 022217us

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NyAlternate names: angiotensin II receptor chain B
Cypecies: Ratus norvegiuus (Norway rat)
Cypecies: Atatus norvegiuus (Norway rat)
Cybacession: A42656; S20423

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 angiotensin II receptor type 1A - rat

Allernder names: Alia receptor; Alia receptor

NiAlternder names: Alia receptor; Alia receptor

Cispecies: Rattus norvegicus (Norway rat)

Cispecies: Rattus norvegicus (Norway rat)

Cispecies: Ang-1985 #sequence revision 07-Oct-1994 #text_change 24-Nov-1999

Cispecies: Assection of Cistieis, M.E.; Bibreau, C.; Corvol, P.; Clauser, E.

Biochem. Biophys. Res. Commun. 199, 1347-1354, 1994

A; Title: Synthetic cDNA encoding the rat Alia receptor: a useful tool for structure-funct
